

About Indeplas

Indeplas is a company with more than seven years in the plastic industry, our services covers a wide range of plastics processing needs.

We provide innovative solutions for our customers in the plastic transformation industry, our main business are:

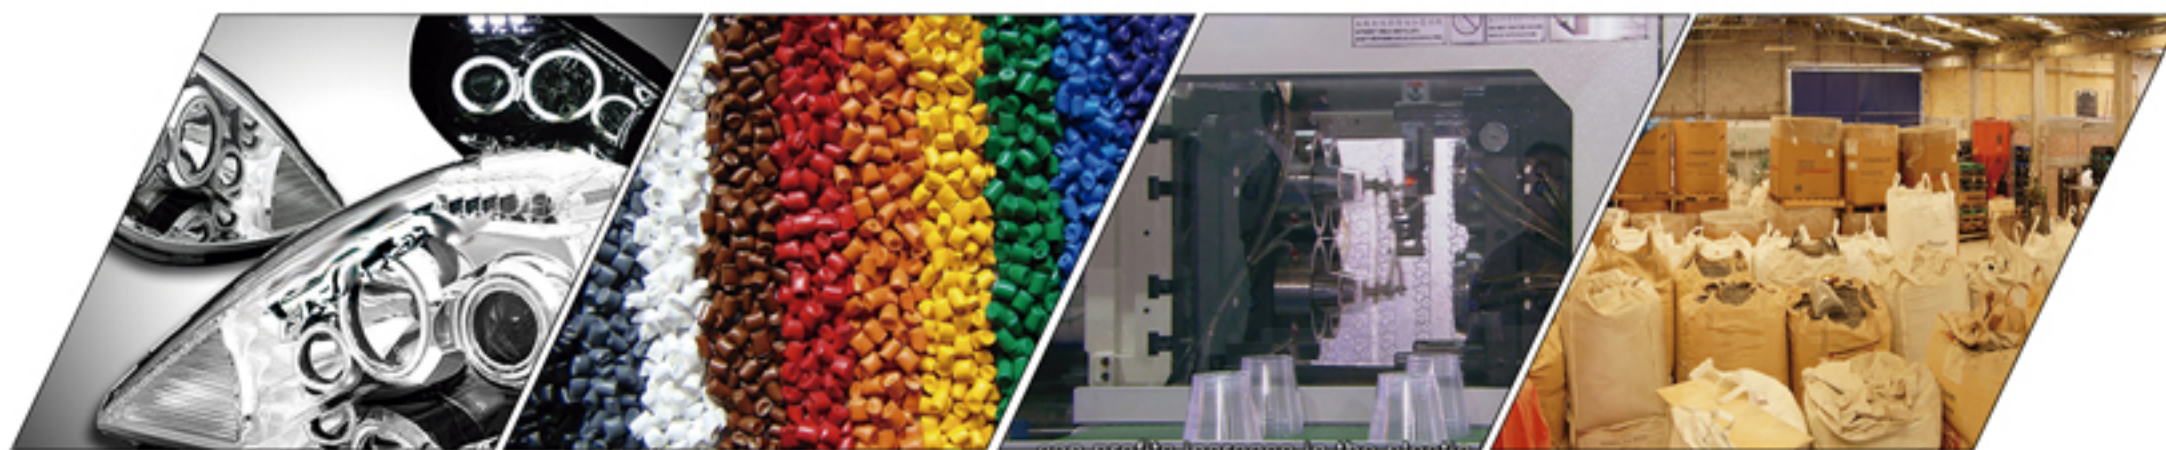

- Automotive**
- Sport and security footwear**
- Home products**
- Virgin and recycled plastics.**
- Infrastructure**

Mission

Be a leading and innovative company in the plastic industry, capable to satisfy the production needs of all our customers, always realizing our work with a superior quality than the industry standards. Continue recycling polymers in order to reintroduce them into the global plastic markets and erase our carbon footprint from our processes and materials.

Vision

Become a manufacturer of parts and components for the automotive, aerospace and electro-domestic industries with global reach and capacity, raise our standards of quality and service always faithful to our innovative and sustainable philosophy.

Innovation - Service - Quality - Discipline

Automotive.

Our equipment includes injection molding machines ranging from 60 tons to 600 tons , all our equipment receives preventive maintenance in order to prevent any delays that can affect production and processes to our customers.

We have the capability to mold in a wide range of injection presses, we can inject small precision parts ranging from 20 to 2,300 grams with the best possible quality in the finished product.

Injection .

We count with in mold labeling process for labeling and customize all types of containers, we can manufacture customized containers with your own brand , promotional cups, and many other products.

The range of our equipment goes from 60 to 600 TN .

We can inject any kind of thermoplastic material from polyolefins, to engineering plastics.

Recycling and reprocessing

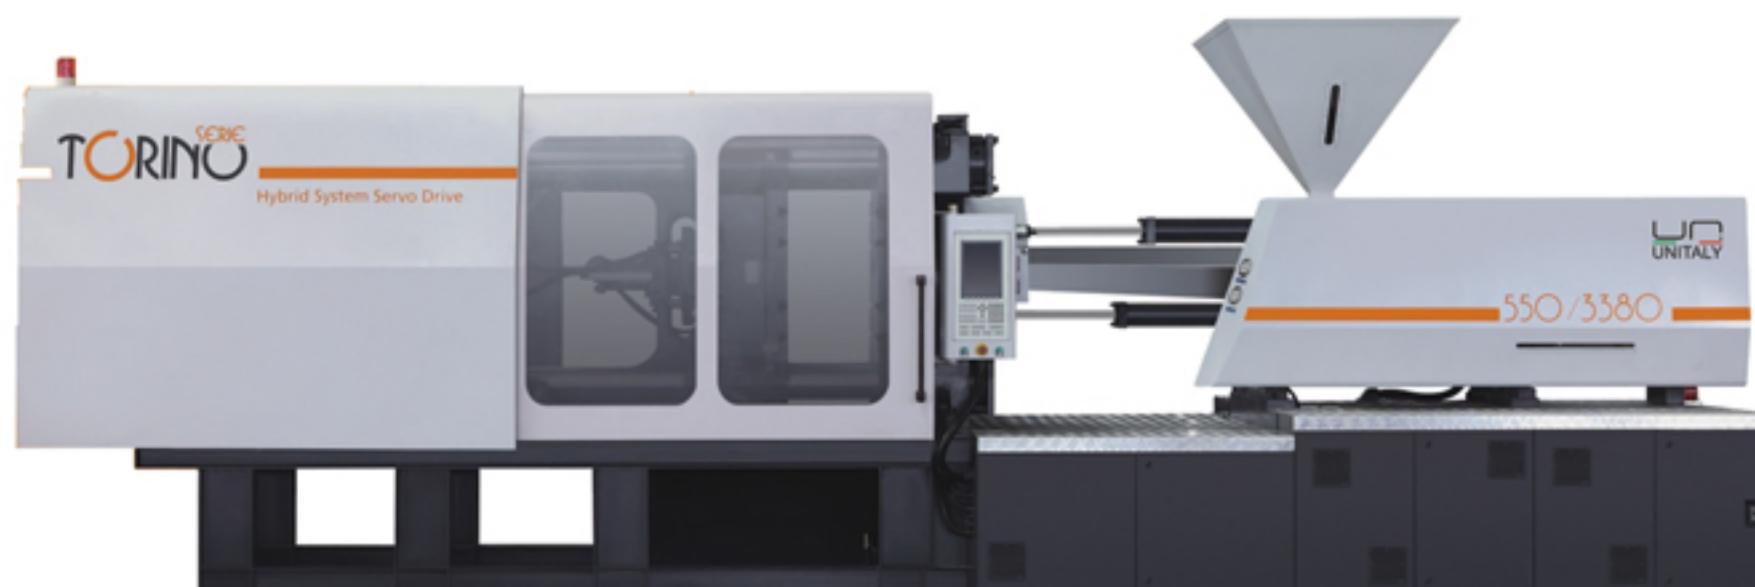

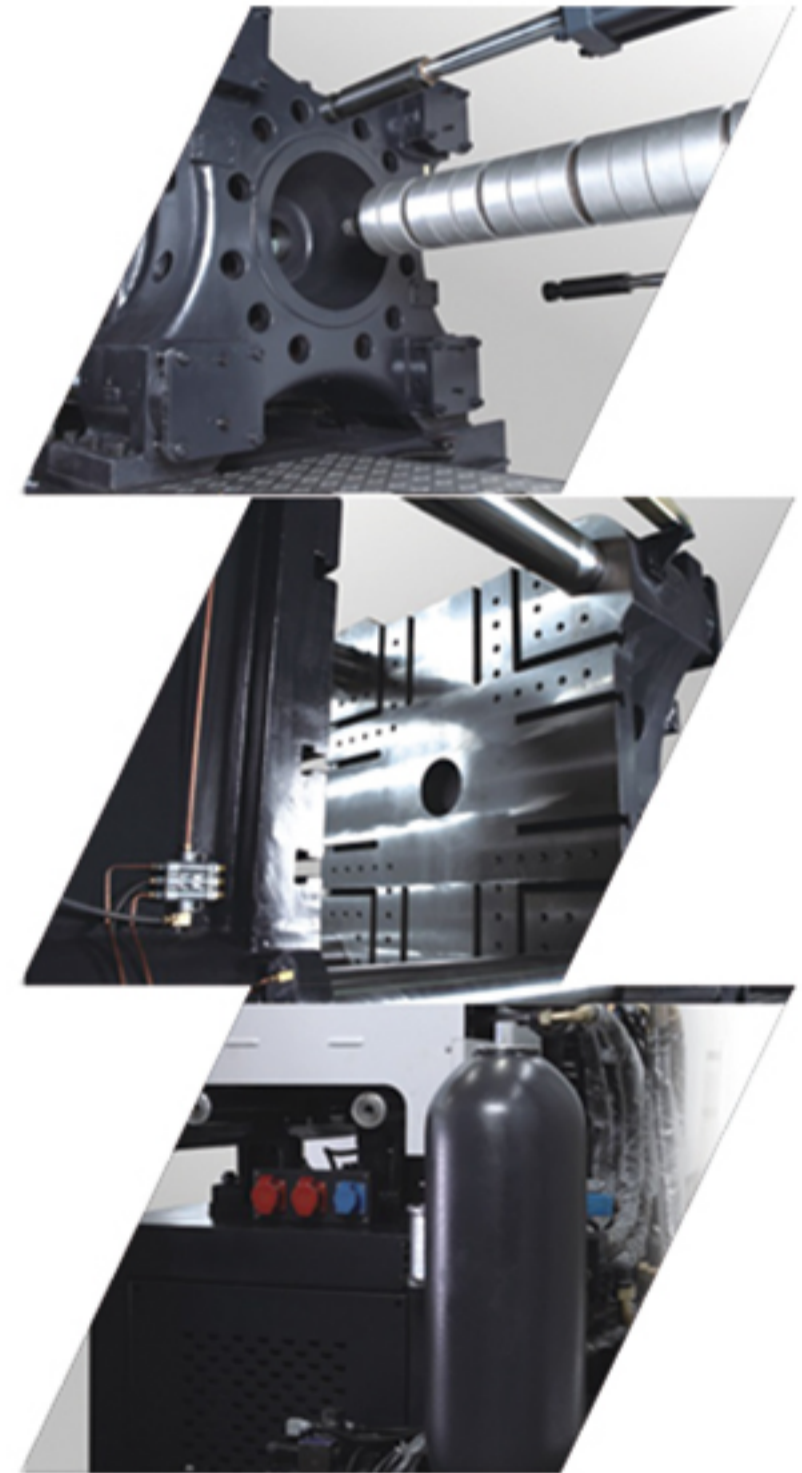

In Indeplas we pay attention to environmental needs and opportunities created by the recovery of materials, as a result we offer recycled materials , which are remanufactured with the highest quality standards, we can recover the plastics in almost any presentation , whether for reuse or sale.

Pelletizing.

Our main pelletizer extruder has the capacity of 200 Kg/hr, it can pelletize films, light materials and densify materials with gas, air and expanding agents.

Regrinding

We can recover almost any plastic material resulting on the plastic industry, lumps, runners, finished products.

IN MEXICO

86,343 MT OF WASTE ARE GENERATED EVERY DAY, THE COUNTRY IS THE 10TH WASTE PRODUCER WORLDWIDE.

10%

OF ALL THE WASTE PRODUCED IN THE COUNTRY IS PLASTIC WASTE, IT MEANS 8,634 MT PER DAY

13%

OF THE PLASTICS PRODUCED IN MEXICO ARE PRODUCED WITH RECYCLED PLASTICS 

500 YEARS

TAKES TO PLASTIC TO DEGRADE

Recycling 

1 MT of plastic scrap

1/2 MT

of crude oil

Huge amounts of fresh clean water

gases - greenhouse - GHG

-hazardous waste of oil industry

RECYCLING

We are recycling 300 MT monthly...

RECYCLING PLASTIC SCRAP SAVES

2/3

of the energy to produce virgin plastic resins.

IN INDEPLAS WE ARE LOOKING TO ELIMINATE OUR TOTAL CARBON FOOTPRINT, THIS INCLUDES THE FOOTPRINT OF OUR PROCESSES AND THE MATERIALS USED IN OUR PROCESSES.

We mainly recycle plastic

waste from automotive, electro-domestic, medical and packing industries.

We reintroduce the recycled plastics to the worldwide plastic markets

With the plastics we recycle,

toys, clothes, footwear, electric devices and many other products are manufactured.
